

13 - BODY

Door locks – All 505 models

From serial number 551 . . . 1 669 842,

all 505 models are fitted with front private door locks of the 205 type, with a larger diameter.

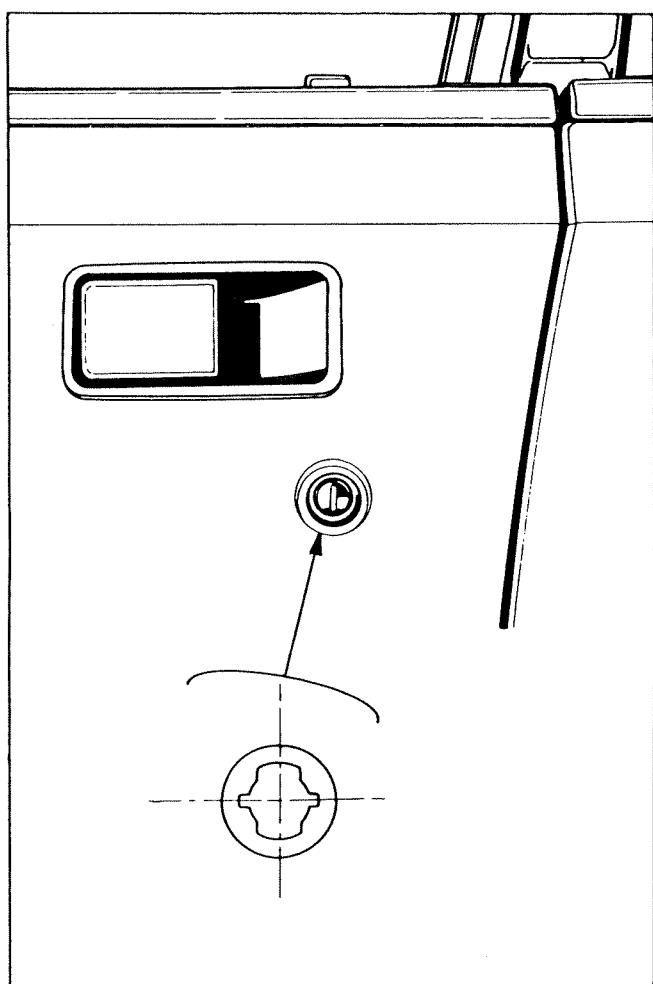

Consequently, the front door panels have a larger piercing and escutcheon (35 mm in place of 30 mm).

Note:

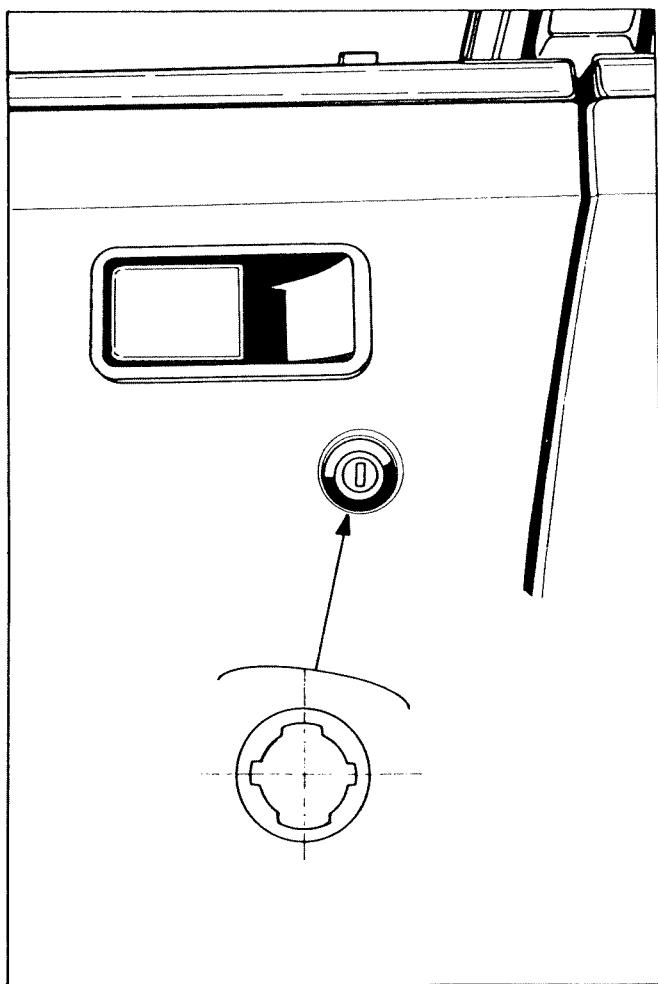

Only the driver's door lock operates the centralised locking of all doors.

Identification

Earlier fitting

Later fitting

Interchangeability

As the locks are not interchangeable, the Parts Division will maintain supplies.

When stocks are exhausted, The Parts Division will supply only the later front doors and door panels.

When changing a front door or door outer panel, in order to fit the earlier type lock to the later part, it is necessary to fit an adaptor (1) (Part No. 9170.58). Observe the correct fitting position.
