

**1 – ENGINE*****Timing gear drive belts on 505 vehicles with ZEJ-ZDK-ZDJL engines***

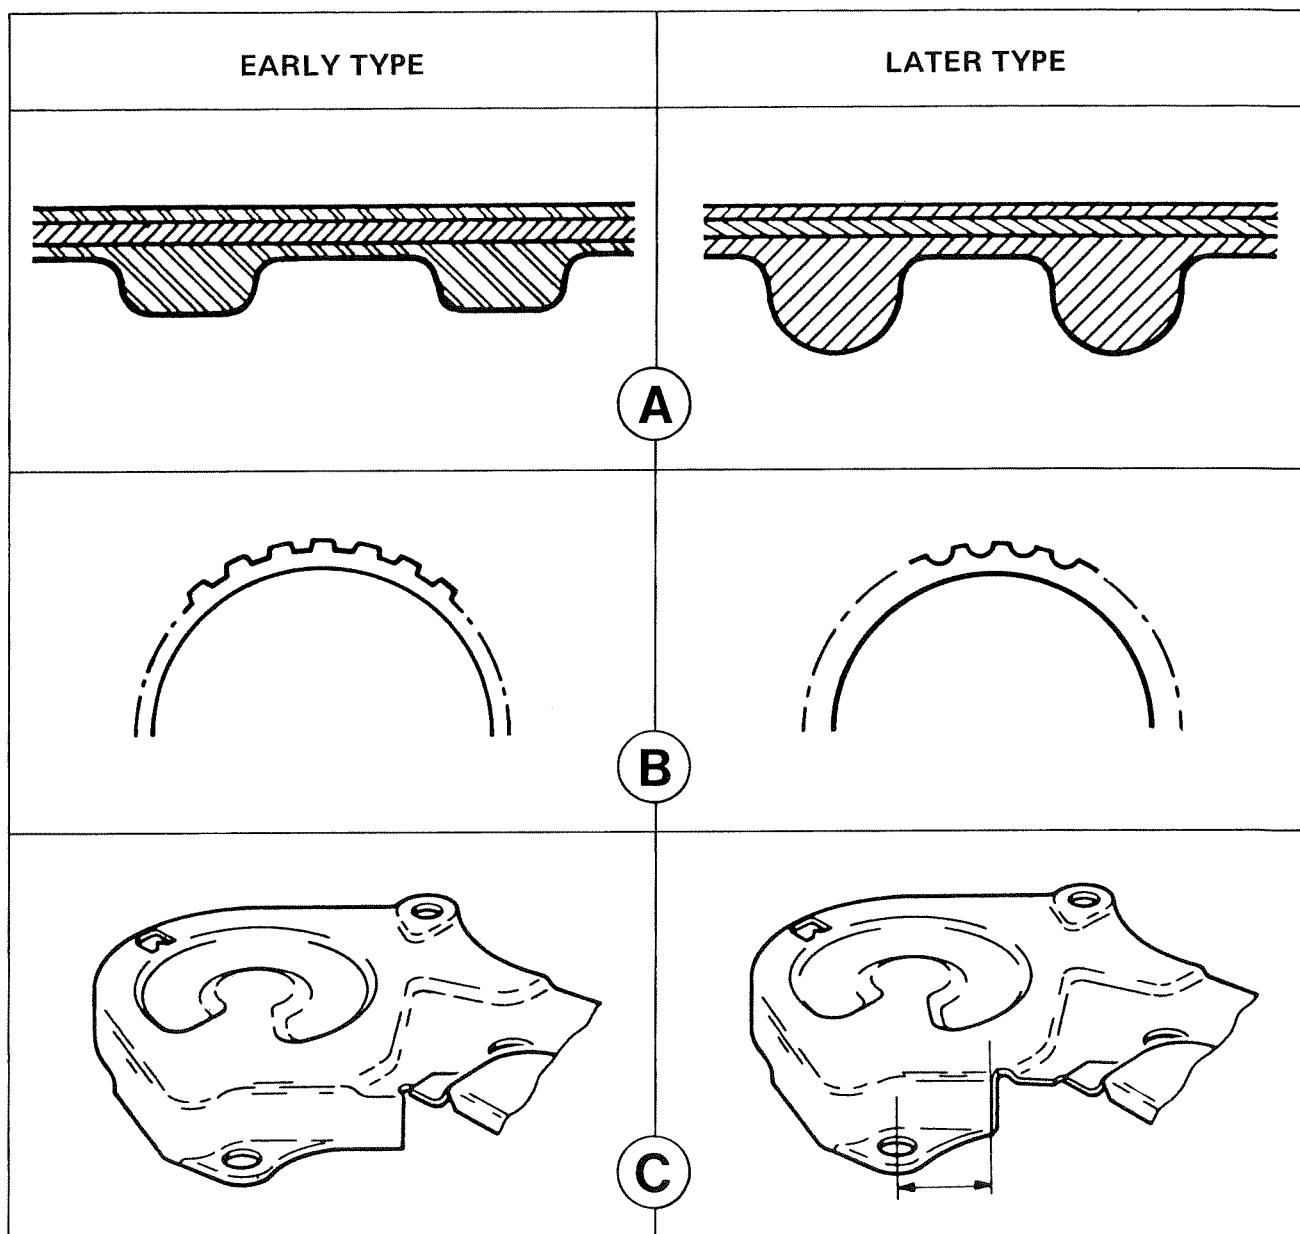

Commencing with serial number 1 624 477,

505 vehicles with ZEJ, ZDK and ZDJL engines will be fitted with a new toothed timing gear drive belt.

This belt has a specific tooth form and has involved fitting new type sprockets to the crankshaft, intermediate shaft and camshaft. Its specific shape and the difference in its thickness have also made necessary an additional cut-out in the timing housing.

The modification only concerns the shape of the belt teeth. The principles of setting the timing and adjusting the belt tension remain the same.

## IDENTIFICATION

A – Toothed belt

B – Sprockets

C – Timing housing

## INTERCHANGEABILITY

The component parts of these two assemblies are not individually interchangeable. The later arrangement can only replace the early arrangement as a complete assembly, that is to say the three sprockets, the toothed belt and the timing housing must all be replaced.
